← WEERSTAND

← *Joye eGo*

VOLTAGE →

v1.0

Zwarte cijfers geven een indicatie van de meest gebruikte wattages van dampers (5 tot 10 watt)

← WATT

Wattage is een maat voor het vermogen - hoe hoger de wattage, hoe warmer de coil.
Een te lage wattage en je dampervaring zal kunnen tegenvallen. Een te hoog wattage zal de coil en liquid kunnen verbranden en spitback geven.
Door de weerstand te lezen en vervolgens de voltage kunt u de wattage bepalen.
